

## **What is the beauty and benefit of using impervia flooring?**

With Impervia flooring all you need is a flat sound sub floor. The lasts push fit click system and acoustic backing means that no adhesives are needed or any other materials to install the floor.

The images of the Impervia white marble tile installed in the Café di Milano – Birmingham was quick and easy to install with no downtime on waiting for adhesives to cure or any form of maintenance to be applied after installation.

There was also no need for any other materials on site which reduce costs and installation time.

Should any tile get badly damaged it can easily be replaced as Impervia flooring can be removed and re-installed many times.

### **Sustainability**

Unlike luxury vinyl tiles Impervia flooring is sustainable and with the option of being able to install, remove, and then re-install it has the best of all flooring options.

In addition, the crushed stone centre core makes up 85% of the material used for Impervia flooring. This prevents it from going to land fill. More on this [can be found on the web site here >>](#)

## Installation

The cost of installing Impervia will be far cheaper than any other flooring material. You can see in this link ([FITTING IMPERVIA- V- LVT TILES](#)) that with Impervia you just need the floor and nothing else.

You can use Impervia tiles anywhere and if it is a large project, we can make a colour and design to meet your requirements.

## Durability of Impervia Flooring

We have tested Impervia flooring extensively and the final assessment test was when two planks were left outside on a driveway for more than 10 months through the best and worst of weather. Apart from hot sunny days it also suffered snow and ice throughout the winter. The report can be seen by clicking the link on the image below.

### Impervia flooring options:

Impervia flooring comes in three options, all of which have a textured surface to imitate real wood or real marble/stone tile:

Wide planks or narrow planks if required

Herringbone: one size lots of finishes

Tiles: various sizes available but the main one is 300mm x 600mm

The current range of colours were chosen by a selection of Interior designers but we can make virtually any colour or design. And the installation of Impervia parquet herringbone flooring in a kitchen can be seen here.
