

Luxury Waterproof Flooring Solutions

IMPERVIA

Flooring Solutions for Architects & Designers

Used anywhere

In the home, restaurant, hotel or office, in fact anywhere that has a floor. We have installed it in canteens as well as retail outlets. The images below show some of our colour and finish ranges. The surface is textured, and the production method we use, compared to others, ensures that this texture generally follows the grain, making it look and feel like real wood.

Perfect for

Kitchens, Living Rooms, Bathrooms, Basements as well as open plan living and apartments. It is waterproof and with a low slip risk in the wet, it will be safer than ceramic tiles.

Great choice for rental properties

It is easy to replace single or multiple boards if needed; using the simple push fit system, fitting costs are lower. Because it is a simple push fit system, anyone can install the floor. You just need a nylon hammer, a straight edge and a robust utility knife

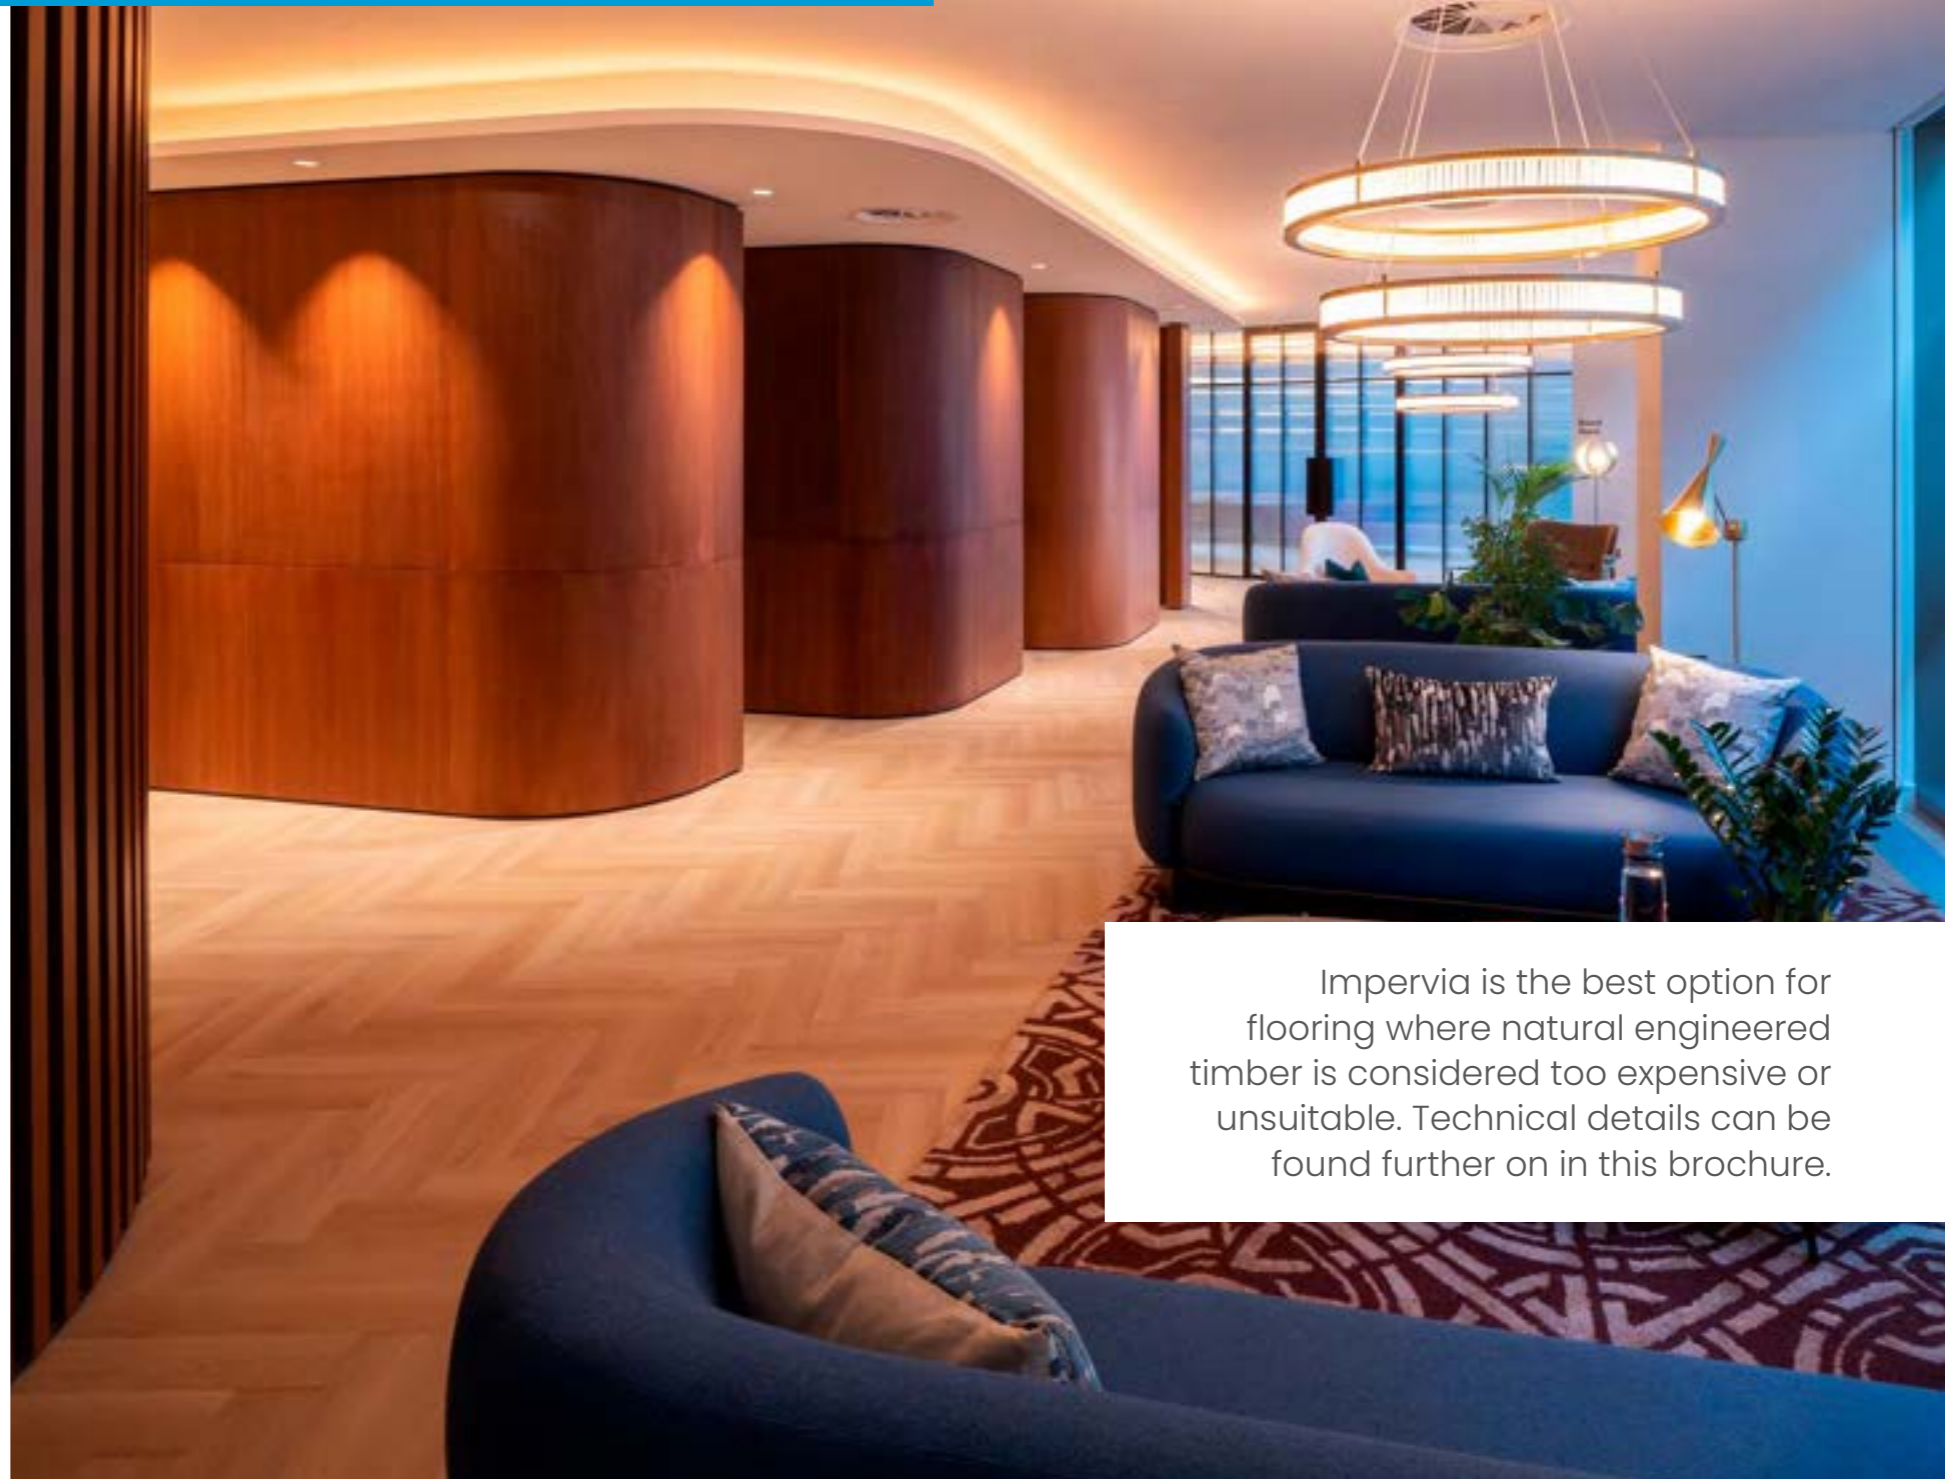

Clad your walls with Impervia

Using an adhesive if required as it is also Fireproof. Use our Herringbone to create a ladder pattern or any other design on your walls.

There is a video here that shows how to fit Impervia and another one that shows the latest push fit system. There are useful links below where you can see how to fit this flooring along with hints on installation:

Designs to meet your requirements

We can make designs to meet your requirements subject to lead time and quantity. The paper décor layer is available in virtually any colour and design. With our Impervia we prefer to follow the traditions of wood flooring, which has a clean contemporary look. All you need to fit Impervia is a flat subfloor which makes installation more economical and easier than any other floor, because you do not need any adhesives.

Impervia is the best option for flooring where natural engineered timber is considered too expensive or unsuitable. Technical details can be found further on in this brochure.

Our mission to net zero

Sustainable wood flooring for better buildings

At Impervia, we take sustainability very seriously. That's why we have made it a policy to source from well-managed, legal and sustainable forests, and to be responsible not only to the environment, but also to our clients, staff and contractors.

As a specialist flooring supplier, our role is to help architects, designers, developers and contractors specify flooring that performs beautifully, lasts for years and supports lower-impact building projects. Sustainability is part of how materials are assessed for provenance, performance, compliance, embodied carbon and long-term value.

We are FSC® certified and PEFC™ certified, with full chain of custody. This means our certified flooring can be traced back to the responsibly managed forest where it was harvested, giving project teams greater confidence when specifying timber flooring for commercial, residential and mixed-use schemes.

We unreservedly condemn illegal logging and the sourcing of materials from deforested regions. We never harvest timber from rainforests and will not manufacture some exotic wood species, as sadly so much timber from these areas comes from questionable sources. With modern oiled finishes, we can create a vast choice of colour tones on oak flooring, without relying on vulnerable exotic timbers.

Our mission to net zero is also supported by product longevity. Flooring that performs over the long term reduces premature replacement, material waste and avoidable disruption. Across our wood, engineered, parquet, Impervia and Trident ranges, we focus on practical performance for real project environments, from homes and apartments to offices, restaurants, hotels and commercial spaces.

For us, the journey to net zero is an ongoing commitment to improving the way flooring is sourced, manufactured, specified and supplied. By combining certified timber, responsible purchasing, durable products and clear specification support, we help clients make better flooring decisions for lower-impact buildings.

Certified timber, responsible sourcing and long-term product performance sit at the centre of our mission to net zero.

Our focus

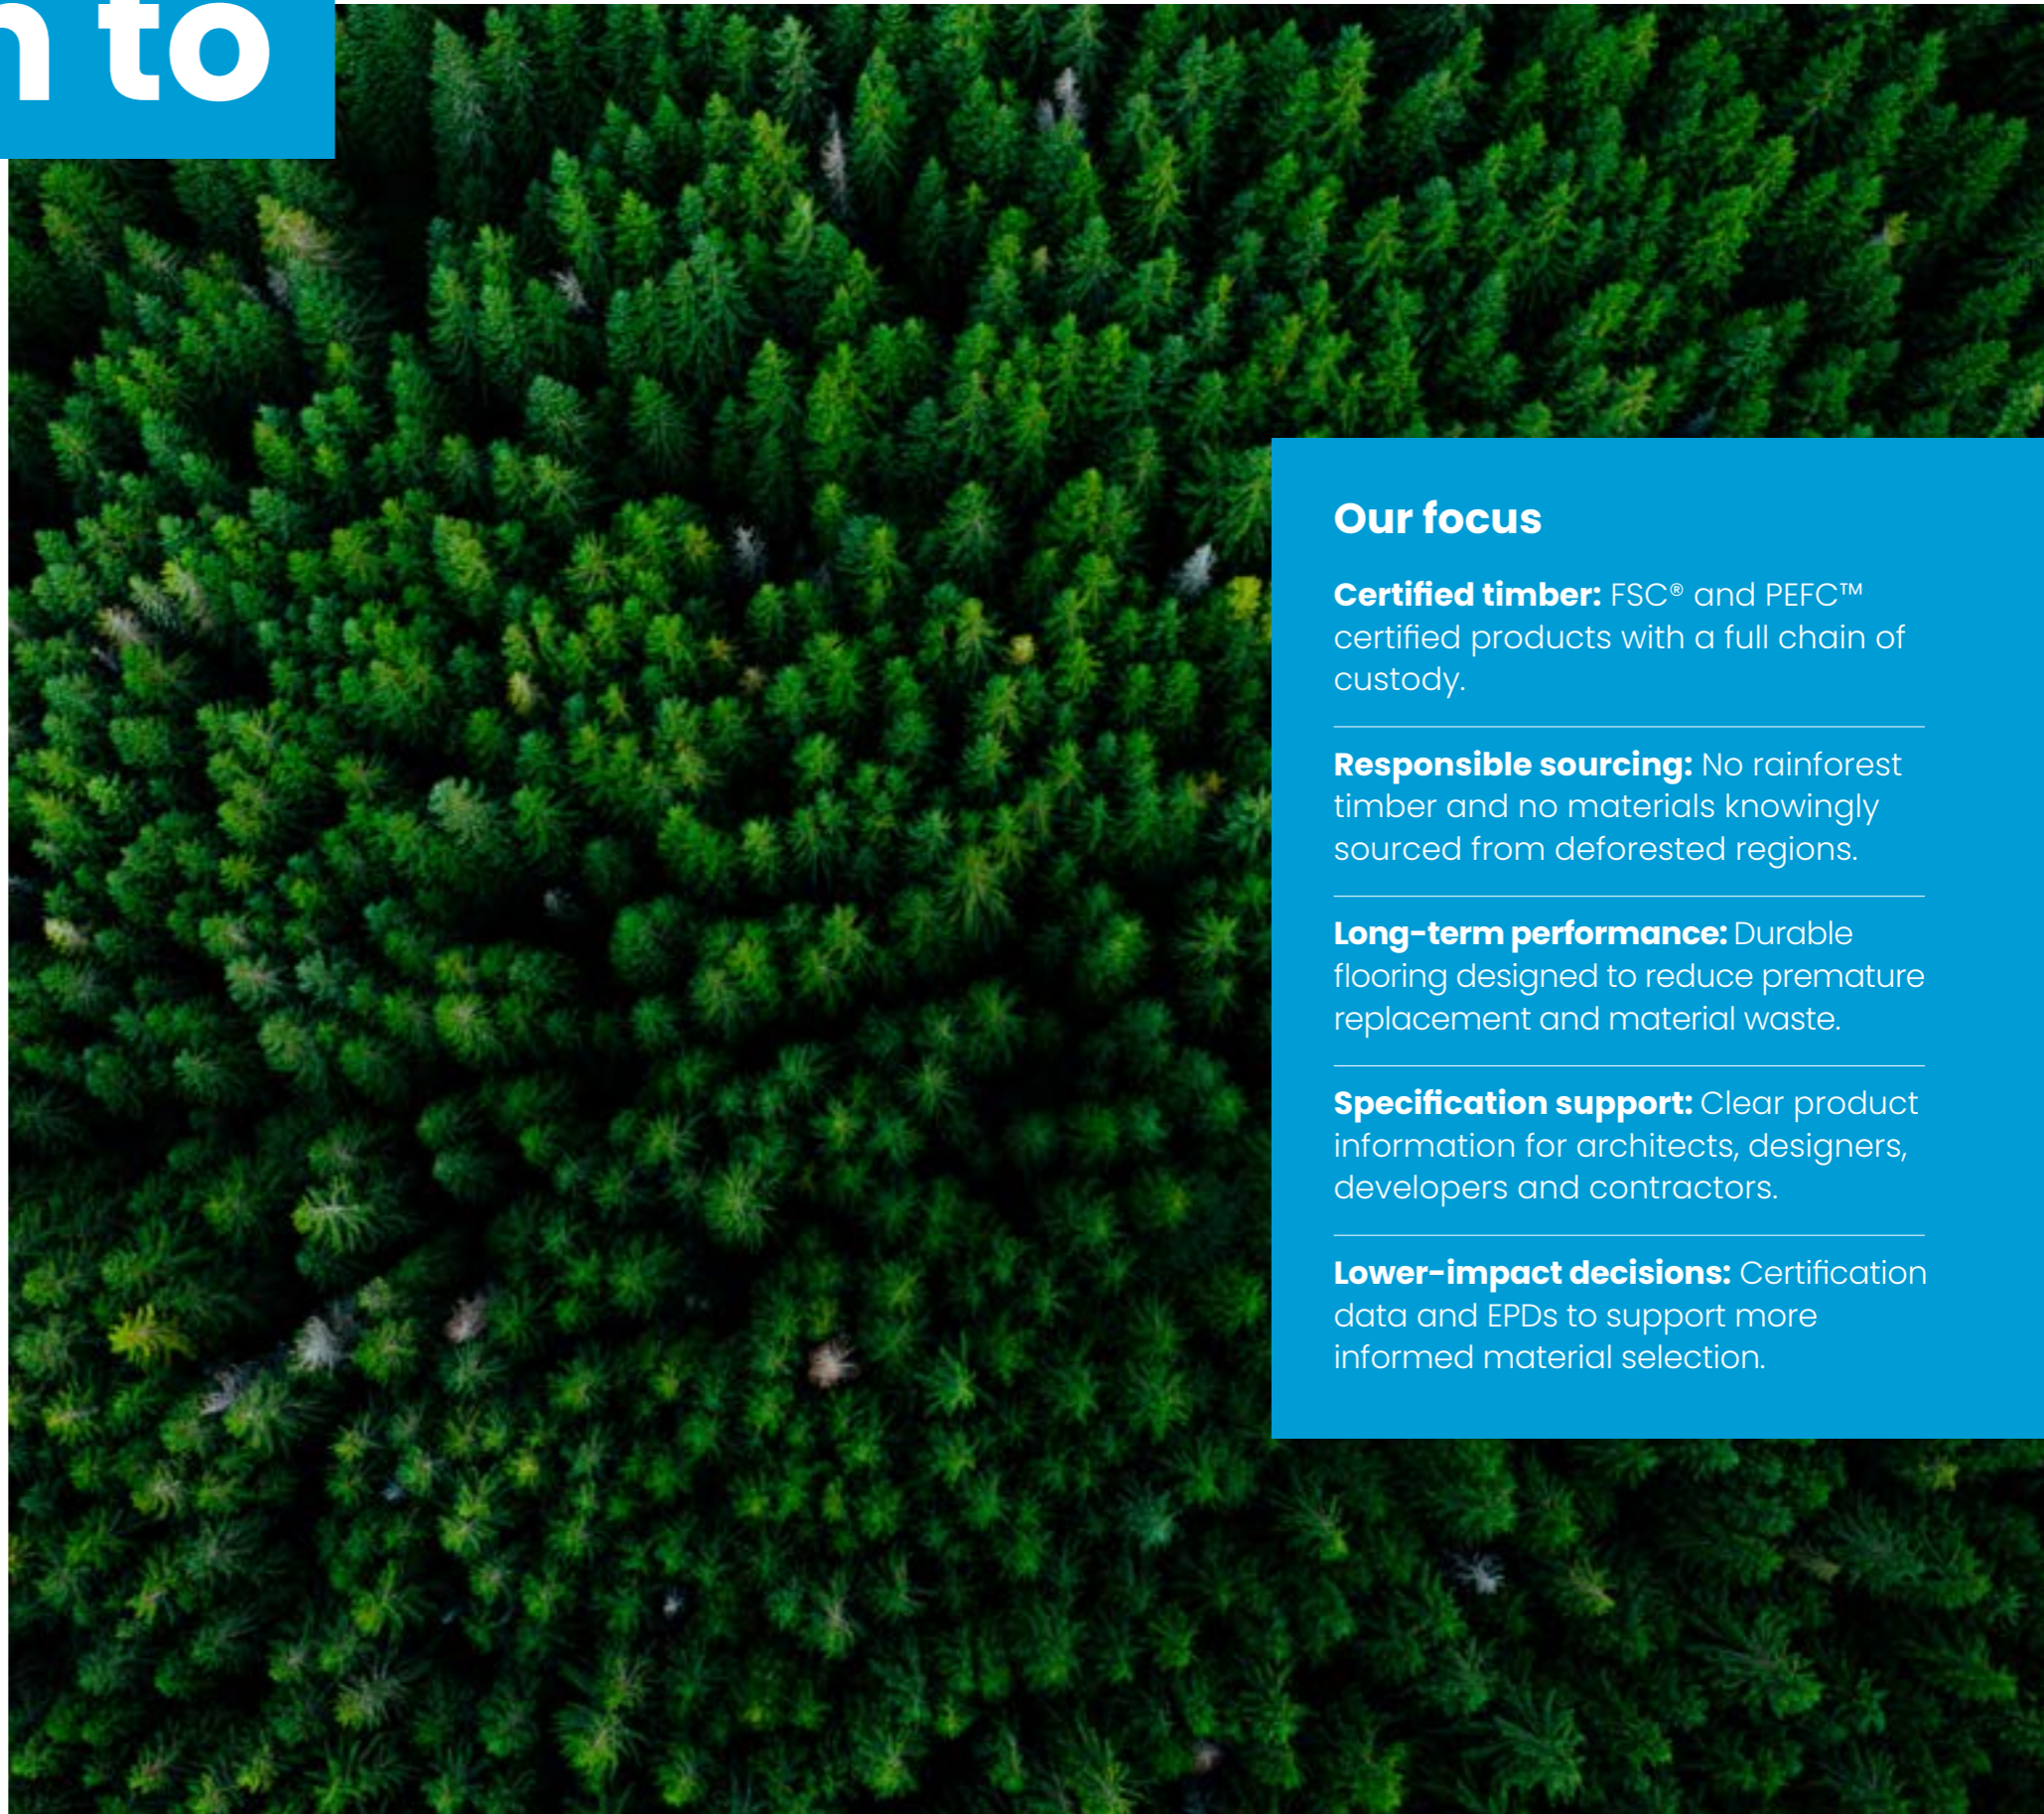

Certified timber: FSC® and PEFC™ certified products with a full chain of custody.

Responsible sourcing: No rainforest timber and no materials knowingly sourced from deforested regions.

Long-term performance: Durable flooring designed to reduce premature replacement and material waste.

Specification support: Clear product information for architects, designers, developers and contractors.

Lower-impact decisions: Certification data and EPDs to support more informed material selection.

Wellbeing and healthy environment

Low-emission flooring, durable finishes and practical maintenance all support healthier internal environments.

Flooring for healthier internal spaces

Healthy buildings begin with better material choices. Flooring has a direct role in how a space looks, performs and feels to use every day.

At Impervia, we supply flooring designed to support high-quality interiors across homes, apartments, offices, hotels, restaurants, schools and commercial spaces.

For architects, designers, developers and contractors, specification is not only about appearance and durability. It is also about indoor air quality, comfort, maintenance, product safety and long-term performance.

Supporting indoor air quality

Many of our flooring products are developed with low-emission performance in mind. Where applicable, our products are supported by recognised certification and testing, including FloorScore® certification for indoor air quality.

FloorScore® assesses flooring products against strict criteria for volatile organic compounds, helping project teams specify with greater confidence in occupied environments.

Designed for real-life use

A healthy environment also depends on how well a product performs over time. Flooring that is durable, easy to clean and resistant to wear, staining and moisture helps interiors remain safer, cleaner and more comfortable for longer.

Across our wood, engineered, parquet, Impervia and Trident ranges, we focus on flooring that supports both design intent and practical use.

Indoor air quality

Low-emission product options and certification where applicable.

Comfort underfoot

Flooring designed to create warm, welcoming internal environments.

Easy maintenance

Surfaces selected for practical cleaning and long-term use.

Durability

Products built to withstand daily wear in residential and commercial settings.

Moisture and stain resistance

Suitable options for demanding spaces where performance is essential.

Moving towards net zero

Responsible logistics for a lower-carbon supply chain

Sustainability does not stop at the product. It also includes how materials are sourced, manufactured, transported and delivered as part of a wider project supply chain.

At Impervia, we recognise that logistics has an important role to play in reducing environmental impact. For architects, designers, developers and contractors, the full journey of a product is becoming an increasingly important part of responsible specification.

From source to site

1. Responsible sourcing

We focus on certified and responsibly sourced flooring, including FSC® and PEFC™ certified timber products with full chain of custody.

2. Manufacturing and supply

Our approach is built around durable flooring, clear product information and long-term performance across commercial, residential and multi-unit projects.

3. Lower-carbon shipping partners

Where products are transported internationally, we work with shipping partners that are investing in lower-carbon logistics and long-term decarbonisation.

4. Project specification

This helps project teams consider not only the product itself, but also provenance, transport, documentation and supply chain responsibility.

Supporting better procurement decisions

Flooring specification is no longer judged on product performance alone. Provenance, certification, embodied carbon, transport, packaging and supply chain accountability are all becoming part of the decision-making process.

By working with responsible partners and continuing to improve product information, we aim to support clients as they move towards lower-carbon buildings and more sustainable procurement.

Supply chain focus

Case Study

York House Wembley Park

We've been working with architecture and development specialists Dandi Living for 12 years. They wanted a cost effective way of retrofitting a 14-storey office block to accommodate 360 apartments with a hard wearing flooring solution.

Client's & Developers: [Dandi Living](#)

Dandi Wembley: A new kind of living

We've been working with architecture and development specialists Dandi Living for 12 years. They wanted a cost effective way of retrofitting a 14-storey office block to accommodate 360 apartments with a hard wearing flooring solution.

We've been involved on the York House project from the beginning. Existing floors have been assessed and levelled, and our Impervia White Washed Oak has now been installed.

The project, known officially as Dandi Wembley, is located in the heart of North West London. It's designed to offer fully furnished studio and one bed apartments surrounded by elevated communal spaces for socialising, relaxing, working and revitalising. Their aim is to deliver a new kind of city co-living.

Case Study

Marble Tile for Caffé Di Milano

Arcadian Leisure approached us when they were exploring options for the development of the Caffé Di Milano restaurant. Some of the challenges involved providing a floor covering that would stand up to heavy footfall as its open from morning till late and on weekends becomes a bar scene.

Client's & Developers: Arcadian Leisure Ltd

Dandi Wembley: A new kind of living

The floor would also need to be highly resistant to spillages, stains and wear on top of that any cleaning would need to be easy without complex processes.

From a design aspect, a calling to the famous Italian Marble flooring was desired. Of course, Marble is extremely expensive and not the best material to be used in this environment because in the immortal words of Bon Jovi – it's slippery when wet. We therefore presented our White Marble effect Impervia tile. This recreates the beauty of Italian Marble as a true fraction of the cost and is extremely slip resistant scoring over 45 PTV (Pendulum Test Value) in the wet.

Impervia also checks the boxes on stain resistance as it's fully waterproof and can be cleaned with any normal household floor detergent.

The flooring was fitted in 2021 and has since endured constant use; Impervia has performed beautifully, fulfilling all the requirements set by the client and is sure to carry on doing so for many years to come.

Rigid Planks

Impervia's Rigid Plank flooring is the way forward for creating cosy spaces. Warm and soft to walk on, our rigid flooring will bring any room to life. As the nearest alternative to real wood, its rigid core offers water and fire-resistant durability.

Light Fumed Oak

Sustainability

With our forests ever decreasing and precious resources being used for an increasing market in wood flooring, Impervia® Flooring is the sustainable option to reduce your impact on the environment, whilst creating a product that is durable enough for even the most high traffic areas.

Impervia and Scope 1, 2 and 3 emissions.

Scope 1 – Direct emissions

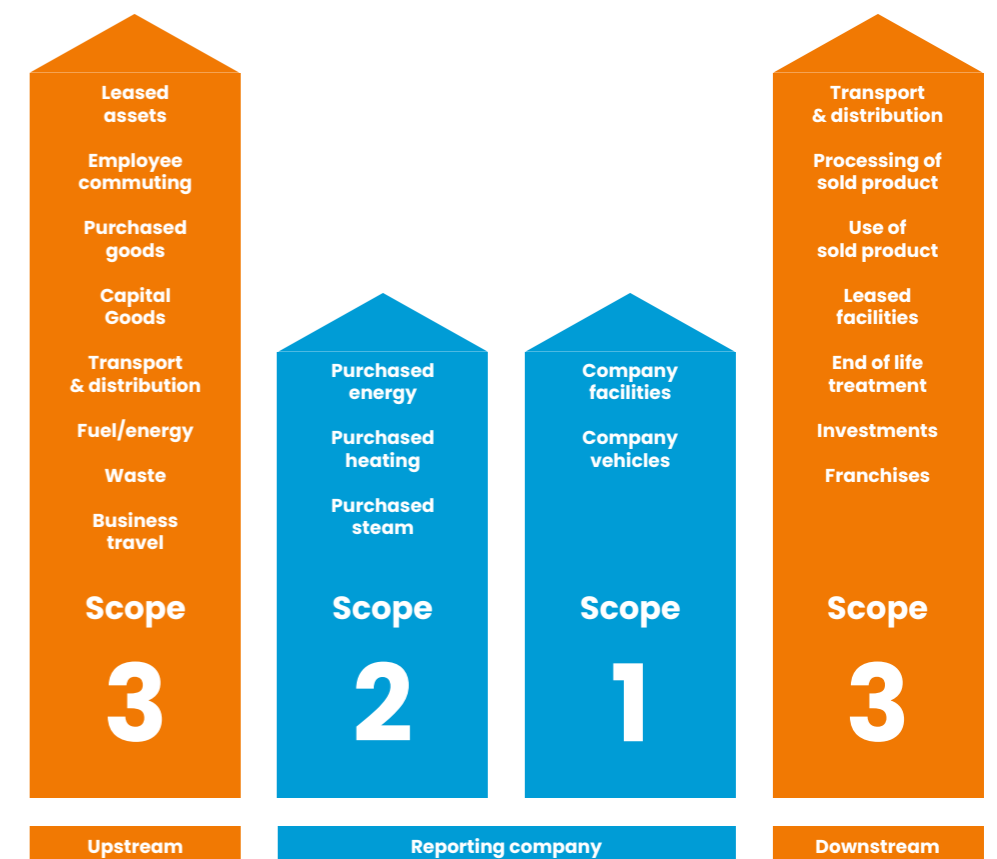

Emissions from operations that are owned or controlled by the reporting company Emissions from combustion in owned or controlled boilers, furnaces, vehicles, etc.; emissions from chemical production in owned or controlled process equipment Indirect emissions.

Scope 2 – Indirect emissions

Emissions are from the generation of purchased or acquired electricity, steam, heating, or cooling consumed by the reporting company Use of purchased electricity, steam, heating, or cooling.

Scope 3 – Indirect emissions

Emissions are all indirect emissions (not included in scope 2) that occur in the value chain of the reporting company, including both upstream and downstream emissions Production of purchased products, transportation of purchased products, or use of sold products.

UV Coating

The UV coating helps to keep your flooring looking great year after year. Keeping the Decor layer from fading and keeping your flooring looking amazing even in the sunniest of environments.

Wear Layer

The wear layer adds a natural texture to your flooring which helps us achieve that great non-slip surface whilst keeping your flooring 100% waterproof.

Décor Film

Where the magic happens, the décor film is the look of your flooring, completing your room with that perfect wood effect, without the worry of humidity or water damage. Just about the closest you can get to the real thing, and if you can't find what you're looking for we can even create a custom texture.

Core Board

A mineral based core made up of magnesium oxide (MGO core) reinforced with tough fibreglass for stability and durability. This means it is fireproof, dent proof, shift proof and mould proof. Whilst being environmentally sustainable.

IXPE Underlayer

You don't need any additional underlay with Impervia® Flooring as built into every board is an IXPE underlay, creating an acoustically dampening surface which is suitable for use with underfloor heating.

Impervia FloorScore® Ratings

Impervia Composite Stone Flooring meets all of the necessary qualifications to be certified for the following claims:

- Indoor Air Quality Certified to SCS-EC10.3-2014 v4.0.
- Conforms to the CDPH/EHLB Standard Method v1.2-2017 (California Section 01350), effective April 1, 2017, for the school classroom and private office parameters when modelled as Flooring.
- Measured Concentration of Total Volatile Organic Compounds (TVOC): Less than/equal to 0.5 mg/m³ (in compliance with CDPH/EHLB Standard Method v1.2-2017) Registration # SCS-FS-04914. Valid from: April 1, 2022 to March 31, 2023.
- SCS Global Services is currently the only certification body approved by the Resilient Floor Covering Institute (RFCI) to provide FloorScore® product.

Environmental Product Declaration Explanation for Impervia

An Environmental Product Declaration, or EPD, is a document which transparently communicates the environmental performance or impact of any product or material over its lifetime.

Ryder International Limited T/A Impervia Flooring and The Solid Wood Flooring Company are working towards net zero by 2030. We have always been conscious of sustainability and reducing our impact on the environment.

Within the construction industry, EPDs support carbon emission reduction by making it possible to compare the impacts of different materials and products in order to select the most sustainable option.

“Compare the impacts of different materials and products in order to select the most sustainable option.”
